ODEK AppCraft- Node Js Problem Statement

Develop a simple RESTful API for a application. The API should handle CRUD operations for tasks and include basic authentication.
Use in memory database.
The focus is on functionality, code quality, and adherence to best practices.

- POST /token - This will return token which will be used for authentication for future API.
- GET /tasks - Retrieve a list of all tasks.
- GET /tasks/:id - Retrieve details of a specific task.
- POST /tasks - Add a new task.
